

Carla Limongelli

Carla Limongelli is Associate Professor of Computer Science at Roma Tre University, Italy, where she has been conducting research on Artificial Intelligence in Education for three decades. Her work on adaptive learning systems, recommender systems, and concept map analysis is grounded in a consistent conviction: the teacher is an indispensable link in the learning process, and intelligent systems should strengthen teachers' judgment rather than replace it. Her current research extends to generative and multimodal AI, including applications to cultural heritage and automated source-code assessment.

She co-founded and coordinates the Working Group on AI and Mindful Education within AIxIA, the Italian Association for Artificial Intelligence, and is a member of EATEL. A senior PC member of AIED and a long-standing PC member of ITS, she has served as Guest Editor of the International Journal of AIED and as Program Co-Chair of AIxIA 2023, the AIED 2025 Doctoral Consortium, and several international workshops in the field.
